Languages: English (professional) · Bangla (native) · Hindi (conversational)

PROFESSIONAL SUMMARY

Backend engineer who **owns systems end-to-end and learns unfamiliar stacks by building production systems in them**. Promoted to Senior Python Executive at Softvence Agency within eleven months for delivering **eight production client backends** on Django REST Framework and FastAPI — specification through to Docker, CI/CD and live deployment. Work fluently with **AI coding assistants (Claude Code, Cursor) while retaining full ownership of correctness, security and code quality**: every repository I lead carries a hand-written architectural rule-set the agent must obey, and I review generated code against it. Strongest in the reasoning half of the job — **decomposing ambiguous requirements into precise, documented specifications**. Generalist across Python, TypeScript, PHP, C/C++, C#/ .NET and embedded C.

TECHNICAL SKILLS

AI-Assisted Development: Claude Code · Cursor · authoring `CONTEXT.md` / `CLAUDE.md` architectural rule-sets for coding agents · reviewing and correcting AI-generated code · knowledge-graph codebase analysis

Computer Science Fundamentals: Data structures & algorithms · object-oriented analysis and design · systems thinking · debugging and code review · database normalisation · reading framework source code and primary documentation over tutorials

Languages: Python (primary) · JavaScript / TypeScript · SQL · PHP · C / C++ · C# / .NET 6 · Java · HTML5 / CSS3 · Bash

Backend, REST APIs & Event-Driven: Django 5.2 · Django REST Framework · FastAPI · REST APIs (versioning, pagination, throttling) · Django Channels / WebSockets · Celery + Celery Beat · Redis as broker / cache / store · webhook contracts with idempotency guarantees · n8n workflow automation

Data: PostgreSQL · MySQL · Redis 7 · Django ORM · Tortoise ORM + Aerich · schema design · query optimisation and N+1 elimination

DevOps, Security & Testing: Docker (multi-stage) · Docker Compose · GitHub Actions CI/CD · AWS (EC2, IAM, S3, SES) · Nginx · Caddy · Linux · JWT with refresh rotation and blacklisting · RBAC · rate limiting · Django TestCase · pytest · Vitest · migration-drift gating in CI

Frontend: Next.js 16 · React 19 · TypeScript 5 · Tailwind CSS 4 · TanStack Query · Zustand · design systems and tokens

Software Development Life Cycle (SDLC) & Specification: Requirement analysis · functional / non-functional requirement specification · use case, activity and swimlane diagrams · ERDs · data-flow diagrams · flowcharts · function-point and cost estimation · feasibility assessment · risk assessment (RMMM) · technical writing

PROFESSIONAL EXPERIENCE

Senior Python Executive — Softvence Agency

Aug 2025 – Present

Dhaka, Bangladesh · On-site · Promoted from Junior Python Developer, Jul 2026

- **Delivered eight production client backends in eleven months** — four on Django REST Framework, four on FastAPI — across AI voice, short-video, lead-generation, e-commerce, geospatial, member-portal, fitness and marketplace domains. Sole backend developer on several; shared a team of two to three on others.
- **Adapted across the stack as project needs changed** rather than specialising narrowly: learned FastAPI, Tortoise ORM and Aerich migrations on live client work while delivering against deadlines, having self-taught production Django the year before.
- **Used AI-assisted development tools to increase productivity while retaining full ownership** of correctness, security and code quality — authoring per-repository architectural rule files agents must follow (performance-first querying, strict separation of concerns, no placeholders), then reviewing generated code against them and rejecting output that was incorrect or suboptimal.
- **Decomposed ambiguous requirements into precise specifications:** ran requirement analysis from seven recorded client calls against a client Dev Brief and Statement of Work, producing numbered functional / non-functional requirement tables, use case, activity, swimlane and ER diagrams, data-flow diagrams and function-point cost estimates as versioned client-facing design documents.
- **Closed a real security gap by reading framework source rather than documentation summaries** — found that Django REST Framework's default model permission class skips the `view_<model>` check on safe methods, letting any authenticated user read any model, and wrote a subclass that enforces it.
- **Owned the full deployment lifecycle personally:** multi-stage Docker images, GitHub Actions pipelines (migration-drift gate → build → push → containerised test run → SSH deploy) and provisioning on AWS EC2 and Hostinger VPS behind Nginx or Caddy. Authored the reusable Django REST foundation adopted as the company baseline, cutting new-project setup from days to hours.
- **Built event-driven integrations with idempotency and failure recovery:** Stripe webhooks keyed on unique event IDs so replays are safe, an authenticated bidirectional webhook contract with an n8n automation engine, and a Celery Beat watchdog that auto-fails and refunds any job stalled past six hours.
- **Contributed to code review and design discussion** across shared backend teams, and wrote a six-chapter plain-language operations handover guide for a non-technical client owner — including a security-cleanup chapter revoking my own access.

Founder, Lead Engineer & Designer — Omnyvora

Jun 2026 – Present

Own organisation · github.com/orgs/omnyvora

- **Sole engineer on a multi-tool SaaS platform** (CV Builder, Portfolio Builder, Image Enhancer) sharing one identity, profile, notification and billing foundation — product definition, architecture, backend, frontend, design system, containerisation and CI/CD all mine.
- **Architected a microservice-ready modular monolith** in Django 5.2 / DRF across four bounded domains with strict models → selectors → services → serializers → views layering and **no cross-domain foreign keys** (soft correlation keys only), so any domain can be extracted into its own service without a rewrite.
- **Self-taught Next.js 16, React 19 and TypeScript to build the frontend**: feature-sliced architecture, TanStack Query, Zustand, and an Axios interceptor performing silent JWT refresh that queues concurrent in-flight requests behind a single refresh. Designed the design system from scratch and wrote a 57 KB API reference.

Web Development Intern — Cyber Hundred

Feb 2024 – Jul 2024

Dhaka, Bangladesh · On-site

- Developed and maintained frontend and backend features using HTML5, CSS, Bootstrap, PHP and MySQL across multiple client web projects.
- Documented project workflows and prepared technical reports; collaborated on project planning and execution; used Git and GitHub for version control.

SELECTED PROJECTS

SafeTag — Emergency Evacuation Status Platform · system design & specification

May 2026

Client engagement, Softvence Agency

- **Authored the complete nine-chapter system design document** for a real-time emergency evacuation platform for US wildfire, hurricane, flood and earthquake response — the deliverable a client contracted before any code was written.
- Covered user roles; technical and operational **feasibility assessment**; an 18-row technology-selection table with a rationale column per choice; numbered functional and non-functional requirements per role; **use case, activity and swimlane diagrams, ERD and data-flow diagrams**; function-point estimation with task scheduling and cost estimation; a full **RMMM risk plan**; QA strategy.

ProspectLead — AI Lead-Generation SaaS · lead backend developer

Jan 2026 – Jul 2026

prospectlead.ai · Django · DRF · PostgreSQL · Redis · Celery · Stripe · n8n · Docker · Caddy

- **Lead backend developer** on a credit-based B2B SaaS turning a keyword and location into a file of AI-qualified business leads — largest share of commits, and owner of architecture, billing, the leads pipeline and observability.
- **Built an append-only credit ledger with reserve-on-submit / finalise-on-callback semantics** so concurrent jobs cannot overspend, with automatic refunds on under-delivery, plus **OpenAI cost governance** (per-day cost and token accounting) giving the business real unit economics per lead. Also designed the product's UI/UX, built the n8n automation workflow itself, and wrote the specification used as the team's source of truth.

Long-Range Smartwatch Platform · self-directed

Jul 2026 – Present

Django · DRF · Django Channels · Flutter · Firebase Cloud Messaging

- **Replaces a smartwatch's ~10 m Bluetooth link with an internet relay** so watch and phone sync at any distance. **The value is how I handled the ambiguity, not the code**: the hardware protocol (REST vs WebSocket vs MQTT) was undecided, so an API built on reversible assumptions would have been throwaway work. I built the service layer first with a human-operated admin panel as the temporary client and deferred API design until the protocol is known — which also made the panel an integration test harness for every service before any device depends on it.

Also built — CHYR, multi-tenant AI voice-receptionist SaaS: owned auth, payments, OTP and subscription domains across 13 Django apps · **django_templet**, my own reusable Django REST starter (JWT, hashed OTP, Celery email, structured logging, Docker, CI/CD) ·

OCReels (FastAPI short-video, ocreels.com) · **Tundra** (three-service e-commerce, thundra.de) · **ArchiCoPro** (archicopro.cloud) · **LookUp** (geospatial AI) · **Outdoorda** (marketplace).

EDUCATION

B.Sc. in Computer Science & Engineering

May 2020 – Jun 2024

IUBAT — International University of Business Agriculture and Technology · CGPA 3.59 / 4.00 · Degree certificate issued 30 May 2024

- **Thesis: Implementation of Parallel Data Transmission in Li-Fi Technology Using RGB Light** — working Arduino prototype encoding three bits per symbol in parallel across RGB colour channels.
- **Practicum: Development of an Internet Service Provider System** — role-based full-stack platform (PHP, MySQL, Bootstrap 5).
- **Relevant coursework**: Data Structures & Algorithms · Object-Oriented Programming · Software Engineering · DBMS · Operating Systems · Compiler Design · Computer Networks · Computer Graphics.

HSC (Science) — Dhaka Udyan Government College · Jun 2017 – Apr 2019 · GPA 3.17 / 5.00 · **SSC (Science)** — Ibn Taymiyyah School and College · Jan 2014 – Apr 2017 · GPA 4.68 / 5.00

CERTIFICATIONS

Python-Django — EDGE, Enhancing Digital Government and Economy (Bangladesh Government ICT programme) · Jul 2025

Internship Certificate — Cyber Hundred · Jun 2024

Self-directed learning: 27 public GitHub repositories spanning Python, C++, PHP, JavaScript, SQL and embedded C, including Arduino and ESP8266 firmware — moved from PHP/MySQL to production Django in under a year through project work, not coursework. References available on request.
