PROFESSIONAL SUMMARY

Python and Django engineer who architects platforms rather than tickets. Promoted to **Senior Python Executive at Softvence Agency within eleven months** for delivering **eight production platforms on API-based architectures** — Django REST Framework on four, FastAPI on four — each owned from **MySQL** or PostgreSQL schema through REST API, containerisation, CI/CD and live **AWS** deployment. I have already done the thing a v2.0 rebuild asks for: designed a domain-driven platform architecture from a blank repository, migrated an existing codebase into a new one, and written the reusable foundation my company now starts every project from. Founder and sole engineer of **Omnyvora**, where I built the Django REST backend, the **React / Next.js** frontend and the design system alone. **B.Sc. in Computer Science & Engineering, IUBAT.**

TECHNICAL SKILLS

Python & Django: Python 3 (primary) · Django 5.2 · Django REST Framework 3.16 · FastAPI · Django Channels / WebSockets · Celery + Celery Beat · SimpleJWT · django-allauth / dj-rest-auth social login · django-filter · django-storages · drf-yasg / Swagger / OpenAPI · Gunicorn / Uvicorn

API-based architecture: REST API design and versioning · unified response envelope across every endpoint · layered models → selectors → services → serializers → views separation · domain-driven bounded contexts · modular monolith designed for service extraction · JWT with refresh rotation and blacklisting · OAuth 2.0 / Google sign-in · OTP verification · role-based access control · rate limiting · idempotent webhooks

Databases: **MySQL** · PostgreSQL · SQLite · Redis 7 · schema design and normalisation · ER modelling · SQL query optimisation · indexing · migrations · Django ORM (select_related, prefetch_related, bulk_update, custom managers, soft delete) · phpMyAdmin and pgAdmin

Frontend: **React 19** · **Next.js 16** (App Router) · TypeScript 5 · **HTML5** · **CSS3** · **JavaScript** (ES6) · Tailwind CSS 4 · shadcn/ui + Radix · TanStack Query · Zustand · React Hook Form + Zod · Bootstrap 5 · UI/UX design, design systems and design tokens

Git & GitHub: Branching strategies · pull-request workflows · code review · GitHub Actions CI/CD · migration-drift gating · 27 public repositories plus two organisation repositories

Cloud & DevOps: **AWS** EC2 (multi-region), IAM, S3, SES, RDS · Hostinger VPS · Cloudflare R2 · Docker (multi-stage) · Docker Compose · Nginx · Caddy · Linux server administration · Sentry · structured logging and live health dashboards

Content & learning platforms: Article and category publishing with status workflows · hierarchical document libraries with typed files · training and event registration flows · moderated forums with a moderation state machine and audit trail · per-resource permission tables · media upload, validation and S3 storage · progress, streak and reward modelling

Process: Requirement analysis · functional and non-functional specification · use case, activity and swimlane diagrams · ERDs and data-flow diagrams · function-point and cost estimation · feasibility assessment · risk assessment (RMMM) · technical writing and developer documentation · Claude Code and Cursor with committed architectural rule-sets

PROFESSIONAL EXPERIENCE

Senior Python Executive — Softvence Agency

Aug 2025 – Present

Mohakhali, Dhaka · Full-time, on-site · Promoted from Junior Python Developer, Jul 2026

- **Delivered eight production platforms in eleven months** — four on Django and Django REST Framework, four on FastAPI — owning each from data model and API design through Docker image, CI/CD pipeline and live deployment. Sole backend developer on several; lead on others.
- **Promoted from Junior Python Developer to Senior Python Executive within eleven months** on the strength of end-to-end ownership rather than tenure.
- **Wrote the reusable Django REST foundation the company now starts every project from** — JWT authentication, Redis-backed hashed OTP, async Celery email with retry backoff, in-app notifications, structured logging, a unified response envelope, a soft-delete base model, a health dashboard, Docker and CI/CD — cutting new-project setup from days to hours. Defining a platform's architecture once, so others build on it, is the work I am strongest at.
- **Migrated an existing backend into a new architecture** on a member-portal project, then extended it with feature-level access control granted per role and overridable per user — the exercise a v2.0 rebuild is made of.
- **Designed API-based architectures rather than endpoint collections** — strict layering where views never touch the ORM directly, versioned URL packages, a consistent response envelope covering 404s, 500s and validation failures alike, and OpenAPI documentation generated from the code.
- **Solved a real security problem by reading framework source rather than documentation:** Django REST Framework's default model-permission class skips the `view__model` check on safe methods, letting any authenticated user read any model. I wrote a subclass that enforces it and rolled it across projects.
- **Owned deployment on AWS personally** — EC2 across two regions with per-environment scoped IAM users, S3 media with explicit bucket policies, SES with DKIM and DMARC, deployed by GitHub Actions over SSH behind Nginx or Caddy.
- **Produced the documentation a team and a client both need** — requirement analysis from recorded calls, requirement tables and diagrams as versioned design documents, per-app developer guides, and a six-chapter plain-language operations handover

for a non-technical owner.

Founder, Lead Engineer & Designer — Omnyvora

Jun 2026 – Present

Own organisation · github.com/orgs/omnyvora · Sole contributor across backend, frontend and design

- **Took a product from a blank repository to a running platform alone** — a multi-tool SaaS (CV Builder, Portfolio Builder, Image Enhancer) on one identity, profile, notification and catalogue foundation, spanning 20 Django apps, a React frontend, a design system, Docker and CI/CD.
- **Architected four bounded domains with no cross-domain foreign keys** so any domain can be lifted into its own service without a rewrite — the decision that makes a v2 platform survive its own growth — documented in a 57 KB API reference and per-app developer guides.
- **Built the full Next.js 16 / React 19 / TypeScript frontend** with feature-sliced architecture, TanStack Query, Zustand and drag-and-drop content management, plus a design system where each product re-themes itself by swapping two CSS custom properties.

Web Development Intern — Cyber Hundred

Feb 2024 – Jul 2024

Khilkhet, Dhaka · On-site · Certificate issued Jun 2024

- Built frontend and backend features in HTML5, CSS, Bootstrap, PHP and MySQL across multiple client web projects; managed databases and optimised queries through phpMyAdmin; used Git and GitHub for collaborative development.

SELECTED PROJECTS

ArchiCoPro — Members' Learning & Content Portal · lead backend developer

Jun 2026 – Jul 2026

archicopro.cloud · Python · FastAPI · PostgreSQL · Redis · Celery · Docker Compose · Caddy

- **Lead backend developer on the closest thing to an eLearning platform I have built** — trainings with format and status enums and registration flows, articles with a publication-status workflow, a hierarchical document library with typed files, events with registrations, and moderated forums with a moderation state machine and audit trail.
- **Built feature-level access control that grants at the role level and overrides per user**, with per-content-type permission tables so visibility is enforced per resource rather than per endpoint — plus admin-editable mail configuration and a scheduled backup system so the organisation can self-manage its own platform.

ProspectLead — AI SaaS Platform · lead backend developer and UI/UX designer

Jan 2026 – Jul 2026

prospectlead.ai · Django · Django REST Framework · PostgreSQL · Redis · Celery · Stripe · OpenAI · Docker

- **Owned architecture, billing, the pipeline and observability** across eleven Django apps — largest share of commits. Two-step OTP email registration plus Google sign-in, an append-only credit ledger that cannot be overspent by concurrent jobs, and idempotent Stripe webhook processing.
- **Designed the product's landing page, dashboard and auth screens** and wrote the specification document the whole team worked from — the product-shaping half of the job, not just the implementation half.

LookUp — AI Building-Recognition & Gamified Tour App · sole backend developer

Apr 2026

Django · Django REST Framework · PostgreSQL · Google social login · AWS S3 · Docker · GitHub Actions

- **Sole backend developer** on a mobile-first app with a complete **gamification economy** — ordered experience-point levels with rewards, badge unlocks at bronze/silver/gold thresholds, daily streak tracking and a search-history model — translated from a product-designed spreadsheet into a constraint-enforced database schema. The same mechanics a learning platform uses to keep students returning.

Also delivered — **CHYR**, multi-tenant AI voice-receptionist SaaS across 13 Django apps · **Tundra** (thundra.de, three-service Django + FastAPI + Next.js e-commerce estate) · **OCReels** (ocreels.com, async FastAPI short-video platform) · **django_templ**et, my own open reusable Django REST starter · **Internet Service Provider System**, my university practicum in PHP/MySQL.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science & Engineering

May 2020 – Jun 2024

IUBAT — International University of Business Agriculture and Technology, Dhaka · CGPA 3.59 / 4.00 · Degree certificate issued 30 May 2024

- **Thesis:** Implementation of Parallel Data Transmission in Li-Fi Technology Using RGB Light. **Practicum:** Development of an Internet Service Provider System. **Coursework:** Data Structures & Algorithms · DBMS · Software Engineering · Operating Systems · Computer Networks.

Python-Django — EDGE, Enhancing Digital Government and Economy (Bangladesh Government ICT programme) · Jul 2025 ·

Internship Certificate — Cyber Hundred · Jun 2024 · References available on request.
