

ABDULLAH MD JAHID HASSAN

Senior Backend Developer — Python · Django REST Framework · FastAPI · PostgreSQL · Celery · Docker · AWS

Dhaka, Bangladesh · UTC+6 | Remote, full-time | +880 1756 254873 | abdullahmdjahidhassan@gmail.com

linkedin.com/in/abdullahmdjahidhassan | github.com/abdullah-md-jahid-hassan | github.com/orgs/omnyvora

English: professional — two years working directly with US, German, Middle Eastern, Brazilian and Australian clients

PROFESSIONAL SUMMARY

Backend engineer who owns systems end-to-end. Promoted to Senior Python Executive at Softvence Agency within eleven months for delivering **eight production client backends** — four on **Django REST Framework**, four on **FastAPI** — from PostgreSQL schema and service-layer architecture through Docker containerisation, GitHub Actions CI/CD and production deployment on AWS EC2, several of them single-handed. Designer of a reusable production-grade Django REST foundation (JWT + hashed OTP, Celery, structured logging, health monitoring) now the baseline across company projects. Founder and sole engineer of **Omnyvora**, a multi-tool SaaS platform spanning a domain-driven Django modular monolith and a Next.js 16 frontend — so a backend brief that spills into the client is not a problem. Strong software-engineering-process background: requirement analysis, ERDs, data-flow diagrams and cost estimation delivered as formal client documentation.

TECHNICAL SKILLS

Languages: Python (primary) · SQL · JavaScript / TypeScript · PHP · C / C++ · Bash

Backend frameworks: Django 5.2 · Django REST Framework 3.16 · FastAPI · Django Channels / WebSockets · Gunicorn · Uvicorn · Daphne / ASGI · Pydantic v2 · drf-yasg / Swagger / OpenAPI

API design: REST API design and versioning · unified response envelope · cursor and page pagination · per-scope rate limiting and throttling · JWT with refresh-token rotation and blacklisting · OAuth 2.0 · TOTP two-factor · RBAC and model-level permissions · idempotent webhook contracts

Data: PostgreSQL (primary) · MySQL · SQLite · Redis 7 as cache, Celery broker and OTP store · Django ORM (select_related/prefetch_related, bulk_update, composite indexes, custom managers, soft delete) · Tortoise ORM + Aerich · schema design, normalisation, ERD modelling, query optimisation and N+1 elimination

Async & background processing: Celery 5 + Celery Beat with isolated queues and explicit routing keys · APScheduler · asynchronous task processing · scheduled and cron-driven jobs · async/await and asyncio · message-broker patterns

DevOps & cloud: Docker (multi-stage) · Docker Compose · GitHub Actions CI/CD · AWS EC2, IAM, S3, SES, RDS · Hostinger VPS · Cloudflare R2 · Nginx · Caddy · Linux server administration · SSH key management

Testing & observability: Django TestCase · pytest + pytest-asyncio · Locust load testing · Bruno and Postman collections · Sentry · structured JSON logging for ELK / Datadog / Loki · request-scoped context via contextvars · live health dashboards · migration-drift gating in CI

Architecture & integrations: Modular monolith · domain-driven design and bounded contexts · service-layer and selector patterns · multi-tenancy · event- and signal-driven design · caching strategies · soft delete · audit logging · Stripe · Tap Payments · OpenAI · ElevenLabs · Twilio · Firebase · n8n

Full-stack reach: Next.js 16 · React 19 · TypeScript 5 · Tailwind CSS 4 · TanStack Query · Zustand · design systems — enough to own a feature across the boundary when a project needs it

PROFESSIONAL EXPERIENCE

Senior Python Executive — Softvence Agency

Aug 2025 – Present

Dhaka, Bangladesh · Promoted from Junior Python Developer, Jul 2026 · US, German, Middle Eastern, Brazilian and Australian end-clients

- **Delivered eight production client backends in eleven months** — four on Django REST Framework, four on FastAPI — across AI voice SaaS, short-video, lead generation, e-commerce, geospatial, member portal, fitness and marketplace domains. Sole backend developer on several; lead on others.
- **Promoted from Junior Python Developer to Senior Python Executive within eleven months** on the strength of end-to-end delivery ownership, not tenure.
- **Authored the reusable production-grade Django REST foundation adopted as the company baseline** — JWT auth, Redis-backed SHA-256 hashed OTP, async Celery email with retry backoff, in-app notifications, structured logging, unified response envelope, soft-delete base model, health dashboard, Docker and CI/CD — cutting new-project setup from days to hours.
- **Ran Celery and Celery Beat as production infrastructure:** isolated queues with explicit routing keys so slow analytics writes can never block business tasks, scheduled subscription renewals applying deferred plan changes at the next billing cycle, and a Beat watchdog that auto-fails and refunds any job stalled past a six-hour SLA.
- **Owned the full deployment lifecycle personally** — multi-stage Docker images, Compose stacks split by environment, GitHub Actions pipelines (migration-drift gate → build → push → containerised test run inside the real artefact → SSH deploy with pull-retry), and provisioning on AWS EC2 across two regions and Hostinger VPS behind Nginx or Caddy.
- **Built a credit-based billing engine** with reserve-on-submit / finalise-on-callback semantics, automatic refunds for under-delivery, and an append-only credit ledger carrying a running balance snapshot per transaction for auditability.
- **Implemented structured observability** — a non-blocking queue-handler logging pipeline writing to a queryable log model with request-scoped context (request ID, actor, IP, user agent) carried through contextvars, JSON output for downstream aggregation, and a live health dashboard covering database, Redis, SMTP, Celery worker and Celery Beat.

- **Closed a real authorisation gap by reading framework source rather than docs:** Django REST Framework's default model-permission class skips the `view_<model>` check on safe methods, letting any authenticated user read any model — I shipped a subclass that enforces it across projects.

Founder, Lead Engineer & Designer — Omnyvora

Jun 2026 – Present

Own organisation · github.com/orgs/omnyvora · Sole contributor

- **Architected a microservice-ready modular monolith** in Django 5.2 / DRF across four bounded domains with strict `models` → `selectors` → `services` → `serializers` → `views` layering and **no cross-domain foreign keys** — domains correlate through soft keys — so any domain can be extracted into its own service without a rewrite.
- **Separated the two observability planes deliberately:** an engineering log plane with a circuit-breaking database handler and JSON formatting, and a product-analytics plane with session and activity tracking on its own Celery queue, each with composite indexes on every query path.
- **Documented the system as a deliverable** — a 57 KB endpoint-by-endpoint API reference, a 26 KB activity-system guide, a 21 KB logging-system guide and per-app developer guides — alongside the Next.js 16 / React 19 frontend I also built.

Web Development Intern — Cyber Hundred

Feb 2024 – Jul 2024

Dhaka, Bangladesh · On-site

- Built frontend and backend features in HTML5, CSS, Bootstrap, PHP and MySQL across multiple client web projects; documented workflows and used Git and GitHub for collaborative development.

SELECTED PROJECTS

ProspectLead — AI Lead-Generation SaaS · lead backend developer

Jan 2026 – Jul 2026

prospectlead.ai · Django · Django REST Framework · PostgreSQL · Redis · Celery · Stripe · OpenAI · Docker · Caddy

- **Owned architecture, billing, the leads pipeline and observability** across eleven Django apps — largest share of commits on the repository. Credits are reserved on submit and finalised on callback so concurrent jobs cannot overspend, with automatic refunds on under-delivery and a Celery Beat watchdog for stalled jobs.
- **Gave the business real unit economics per lead** through per-day, per-project OpenAI cost and token accounting with an audited sync run and an adjustment ledger; secured the automation boundary with a bearer-authenticated inbound webhook and idempotent Stripe webhook processing keyed on a unique event ID.

ArchiCoPro — Professional Association Member Portal · lead backend developer

Jun 2026 – Jul 2026

archicopro.cloud · FastAPI · Tortoise ORM + Aerich · PostgreSQL · Redis · Celery · Docker Compose · Caddy

- **Built feature-level RBAC that grants at the role level and overrides per user**, with per-content-type permission tables so visibility is enforced per resource rather than per endpoint — across articles, a hierarchical document library, events, moderated forums with a moderation state machine and audit trail, trainings and notifications.

CHYR — Multi-Tenant AI Voice-Receptionist SaaS · backend developer

Apr 2026 – May 2026

Django · Django REST Framework · PostgreSQL · Redis · Celery · Stripe · Tap Payments · ElevenLabs · AWS EC2 (two regions) · AWS SES

- **Owned auth, payments, subscriptions, OTP and logging across a 13-app platform** — a dual payment-provider abstraction over Stripe and Tap with lazily created customer records, a metered subscription engine with usage limits and overage pricing, and role-scoped multi-tenant membership with expiring invitation tokens provisioned in a single atomic transaction.

Also delivered — **OCReels** (ocreels.com, async FastAPI short-video platform: auto-discovering modular architecture, TOTP two-factor, custom RBAC synced from code on boot, Sentry, Locust) · **Tundra** (thundra.de, three-service Django + FastAPI + Next.js e-commerce estate) · **LookUp** (geospatial building recognition with a gamified XP economy) · **django_templet**, my own open reusable Django REST starter.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science & Engineering

May 2020 – Jun 2024

IUBAT — International University of Business Agriculture and Technology, Dhaka · CGPA 3.59 / 4.00

- **Thesis:** *Implementation of Parallel Data Transmission in Li-Fi Technology Using RGB Light*. **Coursework:** Data Structures & Algorithms · Software Engineering · DBMS · Operating Systems · Computer Networks · Compiler Design.

Python-Django — EDGE, Enhancing Digital Government and Economy (Bangladesh Government ICT programme) · Jul 2025 ·

Internship Certificate — Cyber Hundred · Jun 2024 · References available on request.
