

ABDULLAH MD JAHID HASSAN

Senior Full-Stack Engineer — Python 3 · Django REST Framework · Celery · PostgreSQL · React · Next.js · TypeScript

Dhaka, Bangladesh · UTC+6 | Remote, full-time | +880 1756 254873 | abdullahmdjahidhassan@gmail.com

linkedin.com/in/abdullahmdjahidhassan | github.com/abdullah-md-jahid-hassan | github.com/orgs/omnyvora

English: professional — two years working directly with US, German, Middle Eastern, Brazilian and Australian clients

PROFESSIONAL SUMMARY

Full-stack engineer equally comfortable in the **database, the API layer and the React components**. Promoted to Senior Python Executive at Softvence Agency within eleven months for delivering **eight production client backends** on Python 3 / Django REST Framework and FastAPI — PostgreSQL schema and Celery workers through Docker Compose local development, CI/CD pipelines and live deployment I run myself. Built **Omnyvora** single-handed: a Django REST modular monolith behind a **Next.js 16 / React 19 / TypeScript** frontend. **Daily power user of Claude Code and Cursor** — every repository I lead carries a hand-written architectural rule-set the agent must obey, and I review generated code against it rather than shipping it. I **pressure-test product specs before executing them**: requirement analysis, formal system design documents and written design critique are things I deliver, not things I wait for.

TECHNICAL SKILLS

Backend: Python 3 (3.11–3.13) · Django 5.2 · Django REST Framework · FastAPI · REST API design, versioning and pagination · Celery + Celery Beat with isolated queues · Django Channels / WebSockets · JWT with refresh-token rotation and blacklisting · RBAC · rate limiting · idempotent webhook contracts

Frontend: React 19 · Next.js 16 (App Router, route groups, server/client components) · TypeScript 5 · Tailwind CSS 4 · TanStack Query · Zustand · React Hook Form + Zod · shadcn/ui + Radix · Axios interceptors with silent token refresh · Vitest + Testing Library

Data: PostgreSQL in production · Redis 7 (cache, broker, OTP store) · MySQL · Django ORM · Tortoise ORM + Aerich · schema design · indexing · query optimisation and N+1 elimination

AI-assisted development: Claude Code and Cursor in daily production use · authoring CONTEXT.md / CLAUDE.md architectural rule-sets that constrain agent output · reviewing and rejecting incorrect generated code · knowledge-graph codebase analysis to audit coupling and import cycles

DevOps & CI/CD: Docker (multi-stage) · **Docker Compose for local development** and split production stacks · GitHub Actions CI/CD (migration-drift gate → build → push → containerised test run → SSH deploy) · AWS EC2, IAM, S3, SES, RDS · Nginx · Caddy · Linux · Gunicorn / Uvicorn

Observability: Sentry · structured JSON logging formatted for Loki / ELK / Datadog · request-scoped context via contextvars · queryable system-log model with a non-blocking queue handler and circuit breaker · live health dashboards (database, Redis, SMTP, Celery worker, Celery Beat)

Product & specification: Pressure-testing and rewriting product specs · requirement analysis from client calls · functional / non-functional requirement tables · use case, activity, swimlane and ER diagrams · data-flow diagrams · OpenAPI / Swagger documentation · UI/UX design and design-token systems

PROFESSIONAL EXPERIENCE

Senior Python Executive — Softvence Agency

Aug 2025 – Present

Dhaka, Bangladesh · Promoted from Junior Python Developer, Jul 2026 · US, German, Middle Eastern and Australian end-clients

- **Delivered eight production client backends in eleven months** — four on Django REST Framework, four on FastAPI — owning each from PostgreSQL data model and API surface through Docker image, GitHub Actions pipeline and live deployment. Sole backend developer on several; shared a team of two to three on the rest.
- **Ran Celery and Celery Beat as production infrastructure, not a side feature:** isolated queues with explicit routing keys so slow analytics writes can never block business tasks, scheduled subscription-renewal tasks that apply deferred plan changes at the next billing cycle, and a Beat watchdog that auto-fails and refunds any job stalled past a six-hour SLA.
- **Used Claude Code and Cursor daily while keeping architecture and code quality human-owned** — wrote per-repository rule files agents must follow (performance-first querying with `select_related/prefetch_related`, strict separation of concerns, no placeholder implementations), then reviewed generated code against them and rejected what was wrong.
- **Pressure-tested specs instead of executing them:** ran requirement analysis across seven recorded client calls against a client Dev Brief and Statement of Work, then authored the subscription-tier and abuse-prevention specification the billing engine was actually built to — and delivered a page-by-page written design critique of the client dashboard that turned into a frontend work plan.
- **Closed a real authorisation gap by reading framework source rather than docs:** found that Django REST Framework's default model-permission class skips the `view_<model>` check on safe methods — letting any authenticated user read any model — and shipped a subclass that enforces it across projects.
- **Authored the reusable Django REST foundation adopted as the company baseline** (JWT + hashed OTP, async Celery email, structured logging, unified response envelope, soft-delete base model, health dashboard, Docker, CI/CD), cutting new-project setup from days to hours.
- **Communicated in writing across timezones as the default** — versioned system design documents, per-app developer guides, OpenAPI collections, and a six-chapter plain-language operations handover for a non-technical client owner, closing with a security-cleanup chapter that revokes my own access.

Founder, Lead Engineer & Designer — Omnyvora

Jun 2026 – Present

Own organisation · github.com/orgs/omnyvora · Django REST + Next.js 16, sole contributor

- **Sole engineer across the whole stack of a multi-tool SaaS platform** (CV Builder, Portfolio Builder, Image Enhancer) on one identity, profile, notification and catalogue foundation — database, API, React frontend, design system, Docker and CI/CD.
- **Architected a microservice-ready modular monolith** in Django 5.2 / DRF across four bounded domains with strict models → selectors → services → serializers → views layering and **no cross-domain foreign keys**, so any domain can be extracted into its own service without a rewrite.
- **Built the Next.js 16 / React 19 / TypeScript frontend** with a feature-sliced architecture, TanStack Query for server state, Zustand for client state, React Hook Form + Zod validation, and an Axios interceptor that performs a silent JWT refresh and **queues every concurrent in-flight request behind a single refresh** before replaying them.

Web Development Intern — Cyber Hundred

Feb 2024 – Jul 2024

Dhaka, Bangladesh · On-site

- Built frontend and backend features in HTML5, CSS, Bootstrap, PHP and MySQL across multiple client web projects; documented workflows and used Git and GitHub for collaborative development.

SELECTED PROJECTS

ProspectLead — AI Lead-Generation SaaS · lead backend developer

Jan 2026 – Jul 2026

prospectlead.ai · Django · Django REST Framework · PostgreSQL · Redis · Celery · Stripe · OpenAI · n8n · Docker Compose · Caddy

- **Owned architecture, billing, the leads pipeline and observability** on a credit-based B2B SaaS — largest share of commits on the repository. Built an append-only credit ledger with **reserve-on-submit / finalise-on-callback** semantics so concurrent jobs cannot overspend, with automatic refunds on under-delivery.
- **Gave the business real unit economics per lead** through per-request OpenAI cost and token accounting, and secured the automation boundary with a bearer-authenticated inbound webhook contract plus a Celery Beat watchdog for stalled jobs. Also designed the product's UI/UX, built the n8n workflow itself, and wrote the specification the whole team worked from.

Tundra — AI-Enhanced E-Commerce Platform · backend developer, three-service estate

Apr 2026 – May 2026

thundra.de · Next.js frontend + Django REST backend + FastAPI AI service · PostgreSQL · Celery · Stripe · AWS EC2 · Caddy

- **Built the Django REST backend of a three-service production estate** — Next.js frontend, Django API and a FastAPI image-generation service, each independently containerised with its own CI/CD pipeline behind a shared Caddy reverse proxy on one host. Owned the discount engine, order and fulfilment flow, wallet, Stripe payments and a cron-driven marketing automation engine.
- **Ran a documented product-catalogue performance pass** eliminating N+1 queries across the listing endpoints, and shipped an AI custom-product pipeline with per-generation version history so customers iterate designs before ordering.

OCReels — Short-Video Platform · backend developer, async FastAPI service

Jun 2026 – Jul 2026

ocreels.com · FastAPI · async PostgreSQL · Redis · Celery · Sentry · Locust · Cloudflare R2 · React frontend (separate team)

- **Worked in a consumer platform under real traffic:** auto-discovering modular FastAPI architecture with an async lifespan bootstrapping database, Redis, scheduler and permission sync; a creator programme with an application → review → approval state machine and an earnings ledger; Sentry for error tracking and Locust for load testing across a six-domain estate.
- **Tuned media delivery for a video product** — a custom static-files class injecting immutable one-year Cache-Control headers, assets served from Cloudflare R2 behind a CDN origin, and CORS, CSRF-trusted-origin and cookie-domain configuration across every domain in the estate.

Also delivered — SafeTag: authored the complete nine-chapter system design document for a real-time US emergency-evacuation platform (feasibility, requirement engineering, ERD/DFD, function-point and cost estimation, RMMM risk plan) as the contracted deliverable before any code · **CHYR**, multi-tenant AI voice-receptionist SaaS — auth, payments, subscriptions and OTP across 13 Django apps ·

ArchiCoPro (archicopro.cloud, FastAPI member portal with feature-level RBAC) · **django_templet**, my own open reusable Django REST starter.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science & Engineering

May 2020 – Jun 2024

IUBAT — International University of Business Agriculture and Technology, Dhaka · CGPA 3.59 / 4.00

- **Thesis:** Implementation of Parallel Data Transmission in Li-Fi Technology Using RGB Light. **Coursework:** Data Structures & Algorithms · Software Engineering · DBMS · Operating Systems · Computer Networks · Compiler Design.

Python-Django — EDGE, Enhancing Digital Government and Economy (Bangladesh Government ICT programme) · Jul 2025 ·

Internship Certificate — Cyber Hundred · Jun 2024 · References available on request.
