PROFESSIONAL SUMMARY

Full stack Python developer who owns systems end-to-end. Promoted to **Senior Python Executive at Softvence Agency within eleven months** for delivering **eight production client backends** — **Python, Django and Django REST Framework** on four, FastAPI on four — from **PostgreSQL** schema design through **RESTful API** development, **Redis** caching, Docker containerisation, **CI/CD pipelines** and deployment I run myself on **AWS EC2**. Comfortable across the full stack: HTML5, CSS3 and JavaScript through to a complete Next.js and React frontend I built and designed for my own SaaS platform. Formally trained in the software development life cycle — requirement analysis, ERDs, data-flow diagrams and cost estimation delivered as versioned client documentation — and used to being the engineer a client talks to directly.

TECHNICAL SKILLS

Python & frameworks: Python 3 (primary) · Django 5.2 · Django REST Framework 3.16 · FastAPI · Django Channels / WebSockets · Celery + Celery Beat · Unicorn · Uvicorn · drf-yasg / Swagger / OpenAPI · django-filter · SimpleJWT

RESTful APIs: REST API design, versioning and pagination · unified response envelope · JWT authentication with refresh-token rotation and blacklisting · OAuth 2.0 and Google sign-in · OTP verification · role-based access control and model-level permissions · per-scope rate limiting · idempotent webhook contracts · API documentation with Postman and Bruno collections

SQL & databases: PostgreSQL (primary) · MySQL · SQLite · SQL query writing and optimisation · schema design and normalisation · ER modelling · indexing and composite indexes · migrations and migration-drift gating · Django ORM (select_related, prefetch_related, bulk_update, custom managers, soft delete) · Tortoise ORM + Aerich

Caching & queues: **Redis 7** as cache backend, Celery broker and result backend, OTP store and WebSocket channel layer · isolated Celery queues with explicit routing keys · scheduled and cron-driven background jobs · retry with exponential backoff

Frontend: JavaScript (ES6) · HTML5 · CSS3 · AJAX and asynchronous request handling · jQuery-era libraries (AOS, Isotope, GLightbox, Swiper) · Bootstrap 5 · React 19 · Next.js 16 · TypeScript 5 · Tailwind CSS 4 · TanStack Query · Zustand · UI/UX design and design systems

AWS & CI/CD pipelines: AWS EC2 (multi-region), IAM, S3, SES, RDS · Hostinger VPS · Cloudflare R2 · GitHub Actions CI/CD (build → push → SSH deploy) · Docker (multi-stage) · Docker Compose · Nginx · Caddy · Linux server administration · SSH key management

Testing & quality: Django TestCase · pytest · Vitest · Locust load testing · Sentry · structured logging and live health dashboards · code review · Git and GitHub branching strategies and pull-request workflows

Process: Requirement analysis · functional and non-functional specification · use case, activity and swimlane diagrams · ERDs · data-flow diagrams · function-point and cost estimation · feasibility assessment · risk assessment (RMMM) · technical writing and client handover documentation

PROFESSIONAL EXPERIENCE

Senior Python Executive — Softvence Agency

Aug 2025 – Present

Mohakhali, Dhaka · Full-time, on-site · Promoted from Junior Python Developer, Jul 2026 · US, German, Middle Eastern, Brazilian and Australian end-clients

- **Delivered eight production client backends in eleven months** — four on Django and Django REST Framework, four on FastAPI — owning each from PostgreSQL data model and RESTful API surface through Docker image, CI/CD pipeline and live deployment. Sole backend developer on several; lead on others.
- **Promoted from Junior Python Developer to Senior Python Executive within eleven months** on the strength of end-to-end delivery ownership rather than tenure.
- **Built and operated the CI/CD pipelines on every project** — GitHub Actions running a makemigrations --check migration-drift gate, dependency install, image build and push, then a containerised test run against the real artefact, followed by an SSH deploy with image-pull retry and orphan cleanup on AWS EC2 or VPS.
- **Used Redis across four distinct roles in production** — cache backend, Celery broker and result backend, hashed one-time-password store, and WebSocket channel layer — with isolated Celery queues carrying explicit routing keys so slow analytics writes can never block business tasks.
- **Tuned SQL and the ORM where it mattered:** a documented product-catalogue performance pass eliminating N+1 queries on listing endpoints, composite indexes on every query path of the logging and analytics models, and bulk reorder endpoints that issue a single bulk_update after ownership validation instead of N saves.
- **Closed a real authorisation gap by reading framework source rather than docs:** Django REST Framework's default model-permission class skips the view_<model> check on safe methods, letting any authenticated user read any model — I shipped a subclass that enforces it across projects.
- **Authored the reusable Django REST foundation adopted as the company baseline** (JWT + hashed OTP, async Celery email, structured logging, unified response envelope, soft-delete base model, health dashboard, Docker, CI/CD), cutting new-project setup from days to hours.

- **Produced formal client-facing documentation** — requirement analysis from recorded calls, functional and non-functional requirement tables, use case, activity, swimlane and ER diagrams, data-flow diagrams, function-point and cost estimation, and a six-chapter plain-language operations handover for a non-technical owner.

Founder, Lead Engineer & Designer — Omnyvora

Jun 2026 – Present

Own organisation · github.com/orgs/omnyvora · Sole contributor across backend, frontend and design

- **Sole engineer on a multi-tool SaaS platform** (CV Builder, Portfolio Builder, Image Enhancer) — a Django REST modular monolith across four bounded domains with strict models → selectors → services → serializers → views layering and no cross-domain foreign keys, so any domain can be extracted into its own service without a rewrite.
- **Built the full Next.js 16 / React 19 / TypeScript frontend** on top of it — feature-sliced architecture, TanStack Query, Zustand, drag-and-drop content management, and an Axios interceptor performing silent JWT refresh that queues concurrent in-flight requests behind a single refresh — plus the design system and a 57 KB API reference.

Web Development Intern — Cyber Hundred

Feb 2024 – Jul 2024

Khilkhet, Dhaka · On-site

- Built frontend and backend features in HTML5, CSS, Bootstrap, PHP and MySQL across multiple client web projects; managed databases and optimised queries through phpMyAdmin; used Git and GitHub for collaborative development.

SELECTED PROJECTS

ProspectLead — AI Lead-Generation SaaS · lead backend developer

Jan 2026 – Jul 2026

prospectlead.ai · Django · Django REST Framework · PostgreSQL · Redis · Celery · Stripe · OpenAI · Docker · Caddy · GitHub Actions

- **Owned architecture, billing, the leads pipeline and observability** across eleven Django apps — largest share of commits. An append-only credit ledger reserves credits on submit and finalises them on callback so concurrent jobs cannot overspend, with automatic refunds on under-delivery and a scheduled watchdog for stalled jobs.
- **Gave the business real unit economics** through per-day OpenAI cost and token accounting, and made payment handling safe against replays with idempotent Stripe webhook processing keyed on a unique event ID. Also designed the product's UI/UX and wrote the specification the team worked from.

Tundra — AI-Enhanced E-Commerce Platform · backend developer

Apr 2026 – May 2026

thundra.de · Django REST Framework · PostgreSQL · Celery · Stripe · AWS EC2 + S3 + IAM · Caddy · Next.js frontend · FastAPI AI service

- **Built the Django REST backend of a three-service production estate** — Next.js frontend, Django API and a FastAPI image-generation service, each independently containerised with its own CI/CD pipeline behind a shared reverse proxy on one AWS host. Owned the discount engine, orders and fulfilment, wallet, Stripe payments and a cron-driven marketing automation engine.
- **Ran a documented catalogue performance pass eliminating N+1 queries**, built a bulk discount-code series with per-user redemption tracking, and configured S3 media with an explicit bucket policy under scoped IAM users.

CHYR — Multi-Tenant AI Voice-Receptionist SaaS · backend developer

Apr 2026 – May 2026

Django REST Framework · PostgreSQL · Redis · Celery · Stripe · AWS EC2 (two regions) · AWS SES · AWS IAM

- **Owned auth, payments, subscriptions, OTP and logging across a 13-app platform** — a dual payment-provider abstraction, a metered subscription engine applying deferred plan changes at the next billing cycle, and role-scoped multi-tenant membership with expiring invitation tokens provisioned in a single atomic transaction. Deployed across two AWS regions with per-environment IAM users and DKIM/DMARC-configured SES.

Also delivered — **OCReels** (ocreels.com, async FastAPI short-video platform with Sentry and Locust load testing) · **ArchiCoPro**

(archicopro.cloud, FastAPI member portal with feature-level RBAC) · **LookUp** (geospatial building recognition with a gamified XP economy) · **SafeTag**, a nine-chapter system design document · **django_templet**, my own open reusable Django REST starter.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science & Engineering

May 2020 – Jun 2024

IUBAT — International University of Business Agriculture and Technology, Dhaka · CGPA 3.59 / 4.00

- **Thesis: Implementation of Parallel Data Transmission in Li-Fi Technology Using RGB Light.** **Practicum: Development of an Internet Service Provider System** (PHP, MySQL, Bootstrap 5). **Coursework:** Data Structures & Algorithms · DBMS · Software Engineering · Operating Systems · Computer Networks.

Python-Django — EDGE, Enhancing Digital Government and Economy (Bangladesh Government ICT programme) · Jul 2025 ·

Internship Certificate — Cyber Hundred · Jun 2024 · References available on request.
