Languages: Bangla (native) · English (professional) · Hindi (conversational)

PROFESSIONAL SUMMARY

Backend developer with hands-on, production **Django** experience — REST APIs built and operated with **Django REST Framework** and **FastAPI** across eight platforms in eleven months, four on each framework. Currently **Senior Python Executive at Softvence Agency**, promoted from Junior Python Developer within eleven months on the strength of end-to-end delivery rather than tenure. Deep, practical experience with **asynchronous and event-driven architectures**: Celery and Celery Beat task queues with isolated routing, Django Channels over WebSockets, and idempotent webhook processing for Stripe and n8n. Practical **NoSQL** experience with Redis — used as cache, task broker, OTP store and channel layer in every production system, alongside PostgreSQL and MySQL. Deploys and operates its own infrastructure on **AWS** (EC2, IAM, SES, RDS, S3). Founder and sole backend engineer of **Omnyvora**, a Django REST modular monolith built from a blank repository.

TECHNICAL SKILLS

Python & Django: Python 3 (primary) · Django 5.2 · Django REST Framework 3.16 · SimpleJWT · django-allauth / dj-rest-auth social login · django-filter · django-storages · drf-yasg / Swagger / OpenAPI · Gunicorn

FastAPI & asynchronous Python: FastAPI 0.119 · Tortoise ORM 0.25 + Aerich migrations · Pydantic v2 · async DB drivers (asyncpg, aiomysql) · Uvicorn · async application-factory / lifespan patterns · python-socketio

Asynchronous & event-driven architectures: Celery 5 + Celery Beat with isolated queue routing · Django Channels / WebSockets over Daphne · APScheduler · idempotent webhook processing (Stripe, n8n) · signal-driven design

Databases — SQL & NoSQL: PostgreSQL (primary) · MySQL · SQLite · **Redis 7** as a NoSQL key-value store (cache, Celery broker, OTP store, WebSocket channel layer) · Django ORM optimisation (select_related/prefetch_related, bulk_update) · schema design, normalisation, ER modelling

Cloud & DevOps: **AWS** EC2 (multi-region), IAM, SES, RDS, S3 · Hostinger VPS · Cloudflare R2 · Docker (multi-stage builds) · Docker Compose · GitHub Actions CI/CD · Nginx · Caddy · Linux server administration

Backend ecosystem & engineering practices: REST API design & versioning · unified response envelope · layered models → selectors → services → serializers → views separation · JWT auth with refresh rotation & blacklisting · rate limiting · Django TestCase & pytest · migration-drift CI gating · structured logging & health dashboards

PROFESSIONAL EXPERIENCE

Senior Python Executive — Softvence Agency

Aug 2025 – Present

Mohakhali, Dhaka · Full-time, on-site · Promoted from Junior Python Developer, Jul 2026

- **Delivered eight production backends in eleven months** — four on **Django** and Django REST Framework, four on **FastAPI** — each owned end to end from data model through REST API, containerisation and live deployment, across an AI voice-receptionist SaaS, an AI lead-generation platform, an e-commerce estate and a members' content portal.
- **Promoted from Junior Python Developer to Senior Python Executive within eleven months** on the strength of end-to-end ownership rather than tenure.
- **Built and operate asynchronous, event-driven systems in production**: Celery and Celery Beat task queues with explicit, isolated routing keys, Django Channels over WebSockets for low-latency delivery, and idempotent webhook processing for Stripe payment events and n8n automation callbacks.
- **Used Redis — a NoSQL key-value store — as the cache, Celery broker, OTP store and WebSocket channel layer** across every production backend, alongside PostgreSQL and MySQL as the relational stores.
- **Authored a reusable production-grade Django REST starter** (JWT auth, Redis-backed OTP, async Celery email, structured logging, unified response envelope, health dashboard, Docker, CI/CD) that became the baseline for new company projects, cutting setup from days to hours.
- **Owned the full deployment lifecycle personally** — multi-stage Docker images, GitHub Actions CI/CD (build → push → SSH deploy), and provisioning on AWS EC2 and Hostinger VPS behind Nginx or Caddy.
- **Integrated and productionised third-party platforms end to end** — Stripe, Tap Payments, ElevenLabs, Twilio, Cal.com, OpenAI (with per-request token accounting) and n8n — each behind an event-driven or webhook-based contract.
- **Closed a real security gap by reading framework source rather than documentation**: Django REST Framework's default permission class skips the `view_<model>` check on safe methods; I wrote a subclass enforcing it and rolled it across projects.

Founder, Lead Engineer & Designer — Omnyvora

Jun 2026 – Present

Own organisation · github.com/orgs/omnyvora · Sole backend contributor

- **Took a product from a blank repository to a running platform alone** — a multi-tool SaaS on **Django REST Framework**, organised into four bounded domains with strict layering, deployed via Docker and GitHub Actions CI/CD.
- **Designed Celery task queues as isolated, explicitly-routed default/activity queues** — a deliberate event-driven decision, documented in code, so slow analytics writes can never block business tasks — backed by **Redis** as broker and cache.

Khilkhet, Dhaka · On-site · Certificate issued Jun 2024

- Built frontend and backend features in HTML5, CSS, Bootstrap, PHP and MySQL across multiple client web projects; managed databases through phpMyAdmin; used Git and GitHub for collaborative development.

SELECTED PROJECTS

CHYR — AI Voice-Receptionist SaaS · backend developer

Apr 2026 – May 2026

Python · Django 5.2 · DRF · PostgreSQL · Redis · Celery + Beat · Docker · AWS EC2

- Built the asynchronous billing and subscription engine** — Celery Beat renewal tasks, a Tap Payments dunning retry state machine, and idempotent Stripe webhook event processing — across a multi-tenant business model spanning four service verticals.
- Designed the event-driven telephony and voice-agent domain:** phone provisioning with a conditional call-forwarding policy engine, and an ElevenLabs-backed multilingual voice registry across four languages.

ProspectLead — AI Lead-Generation SaaS · lead backend developer

Jan 2026 – Jul 2026

prospectlead.ai · Django · Django REST Framework · PostgreSQL · Redis · Celery + Beat · Stripe · n8n

- Owned the credit-based billing engine end to end** — an append-only ledger with a running-balance snapshot, reserve-on-submit / finalise-on-callback semantics, and a **Celery Beat watchdog** that auto-fails and refunds any job with no callback after six hours.
- Built the event-driven automation contract with n8n** — a bearer-token-authenticated inbound webhook triggering an external scrape-and-extraction pipeline — plus idempotent Stripe webhook processing via a unique event-ID table.

OCReels — Async FastAPI Media Platform · backend developer

Jun 2026 – Jul 2026

ocreels.com · FastAPI 0.119 · Tortoise ORM (async) · PostgreSQL/MySQL async drivers · Redis · Celery + APScheduler

- Built on a fully asynchronous, auto-discovering FastAPI architecture** — an application factory with an async lifespan hook, dynamically registered routes and per-app signal auto-import — running asyncpg/aiomysql drivers and Redis end to end.
- Implemented event-driven moderation and payout domains:** a reel content-review state machine, per-platform share attribution, and a creator-earnings ledger driven by casino-affiliate tracking events.
- Hand-rolled RBAC with a startup `sync_permissions()` routine reconciling the permission table against code on every boot, and immutable one-year cache-control headers on media served from a Cloudflare R2 / S3-backed CDN.

ArchiCoPro — Members' Content Portal · lead backend developer

Jun 2026 – Jul 2026

archicopro.cloud · FastAPI · Tortoise ORM · PostgreSQL · Redis · Celery · Docker Compose · Caddy

- Lead backend developer** on a FastAPI portal with feature-level RBAC — role-level and per-user permission overrides across articles, forums, trainings and a document library — plus a moderated-forum state machine with a full audit trail.
- Built self-service platform operations:** admin-editable SMTP configuration and a scheduled backup system with configurable frequency, so the association could manage its own mail and backups without engineering involvement.

Also delivered — **Tundra** (thundra.de, three-service Django + FastAPI e-commerce estate) · **LookUp** (Django REST gamification backend) · **django_templet**, my own open-source reusable Django REST starter with Celery, Docker and CI/CD built in.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science & Engineering

May 2020 – Jun 2024

IUBAT — International University of Business Agriculture and Technology, Dhaka · CGPA 3.59 / 4.00 · Degree certificate issued 30 May 2024

- Thesis:** Implementation of Parallel Data Transmission in Li-Fi Technology Using RGB Light. **Practicum:** Development of an Internet Service Provider System. **Coursework:** Data Structures & Algorithms · DBMS · Software Engineering · Operating Systems · Computer Networks.

Python-Django — EDGE, Enhancing Digital Government and Economy (Bangladesh Government ICT programme) · Jul 2025 ·

Internship Certificate — Cyber Hundred · Jun 2024 · References available on request.

DAY-TO-DAY TOOLING

API contract testing and documentation with **Bruno** and **Postman** collections, Swagger/OpenAPI via `drf-yasg`; **Sentry** error monitoring; migration-drift and lint gates (`manage.py makemigrations --check`, ESLint, pytest) wired into CI; daily use of **Claude Code** and **Cursor** as accelerators, with a hand-written `CONTEXT.md`/`CLAUDE.md` on every repository encoding the architectural rules the agent must follow. Remote collaboration with US, German, Middle Eastern and Australian clients through the agency's Fiverr-sourced pipeline.
