Languages: Bangla (native) · English (professional) · Hindi (conversational)

PROFESSIONAL SUMMARY

Backend developer with strong, hands-on **Python** and object-oriented programming experience, building **RESTful APIs and microservice-shaped backends** with **Django** and **FastAPI** — eight production platforms in eleven months, four on each framework. Currently **Senior Python Executive at Softvence Agency**, promoted from Junior Python Developer within eleven months on the strength of end-to-end delivery rather than tenure. Daily experience with **PostgreSQL** and **MySQL** schema design and query optimisation, **Redis** as cache and Celery broker, **Docker** multi-stage builds and Compose stacks, **Git**-based collaborative development, **CI/CD** via GitHub Actions, **Linux** server administration, and automated testing with Django TestCase and pytest. Deploys and operates its own infrastructure on **AWS** (EC2, IAM, SES, RDS, S3). Production experience integrating **large language models** — OpenAI with per-request cost and token accounting — inside billing-aware pipelines. Founder and sole backend engineer of **Omnyvora**, a Django REST modular monolith built from a blank repository.

TECHNICAL SKILLS

Python, OOP & frameworks: Python 3 (primary) · object-oriented design · Django 5.2 · Django REST Framework 3.16 · FastAPI 0.119 · SimpleJWT · Pydantic v2 · Gunicorn / Uvicorn

REST APIs & microservices: REST API design & versioning · unified response envelope · layered models → selectors → services → serializers → views separation · domain-driven bounded contexts with no cross-domain foreign keys · modular monolith designed for service extraction

Databases: **PostgreSQL** (primary) · **MySQL** · SQLite · **Redis 7** (cache, Celery broker, OTP store, WebSocket channel layer) · schema design, normalisation, ER modelling · query optimisation & N+1 elimination · Django ORM (select_related/prefetch_related, bulk_update)

DevOps & cloud: **Docker** (multi-stage builds) · Docker Compose · **Git** & GitHub (branching, PR workflows) · **CI/CD** via GitHub Actions (build → push → deploy, migration-drift gating) · **Linux** server administration · **AWS** (EC2 multi-region, IAM, SES, RDS, S3) · Hostinger VPS · Nginx · Caddy

Background jobs & AI/LLM integration: **Celery 5** + Celery Beat with isolated queue routing · APScheduler · Django Channels/WebSockets · **OpenAI** LLM integration with per-request token/cost accounting · ElevenLabs voice synthesis · idempotent webhook processing (Stripe, n8n)

Testing & quality: Django TestCase · pytest + pytest-asyncio · Vitest + Testing Library · migration-drift CI gating · ESLint · structured logging & health dashboards

PROFESSIONAL EXPERIENCE

Senior Python Executive — Softvence Agency

Aug 2025 – Present

Mohakhali, Dhaka · Full-time, on-site · Promoted from Junior Python Developer, Jul 2026

- **Delivered eight production backends in eleven months** — four on **Django** and Django REST Framework, four on **FastAPI** — each a RESTful, microservice-shaped service with clear domain boundaries, owned end to end from data model through deployment.
- **Promoted from Junior Python Developer to Senior Python Executive within eleven months** on the strength of end-to-end ownership rather than tenure.
- **Applied strong object-oriented Python** across every project — a layered models → selectors → services → serializers → views separation, custom permission classes, and a reusable abstract base model inherited across dozens of models.
- **Worked daily with PostgreSQL and MySQL** — schema design, normalisation, ER modelling, query optimisation and N+1 elimination — plus **Redis** as cache, Celery broker, OTP store and WebSocket channel layer.
- **Integrated large language models and AI services in production:** OpenAI with per-request cost and token accounting, and ElevenLabs multilingual voice synthesis, inside billing-aware, cost-governed pipelines.
- **Ran Celery and Celery Beat background job queues** with isolated, explicitly-routed queues in every project, so slow or scheduled work never blocks the request-response path.
- **Owned the Docker and CI/CD pipeline personally** — multi-stage images, Docker Compose stacks, GitHub Actions build-push-deploy over SSH — and administered Linux servers on AWS EC2 and Hostinger VPS.
- **Wrote and maintained automated tests** (Django TestCase, pytest) and gated every CI pipeline on a migration-drift check, keeping production deployments safe.

Founder, Lead Engineer & Designer — Omnyvora

Jun 2026 – Present

Own organisation · github.com/orgs/omnyvora · Sole backend contributor

- **Founded and solely engineer a Django REST modular monolith** organised into four bounded, microservice-extractable domains with strict layering and no cross-domain foreign keys, deployed via Docker and GitHub Actions CI/CD.
- **Wrote the automated test suite and CI gates** — Django TestCase coverage on the backend, Vitest + Testing Library on the frontend, migration-drift and lint checks blocking merge.

Khilkhet, Dhaka · On-site · Certificate issued Jun 2024

- Built frontend and backend features in HTML5, CSS, Bootstrap, PHP and MySQL across multiple client web projects; managed databases through phpMyAdmin; used Git and GitHub for collaborative development.

SELECTED PROJECTS

CHYR — AI Voice-Receptionist SaaS · backend developer

Apr 2026 – May 2026

Python · Django 5.2 · DRF · PostgreSQL · Redis · Celery + Beat · Docker · AWS EC2

- Built a multi-tenant, RESTful backend across 13 Django apps with clear domain boundaries — business, agent, phone, payment, subscription — each independently testable.
- Built the asynchronous billing engine — Celery Beat renewal tasks, a Tap Payments dunning retry state machine, and idempotent Stripe webhook processing — backed by PostgreSQL and Redis.

OCReels — Async FastAPI Media Platform · backend developer

Jun 2026 – Jul 2026

ocreels.com · FastAPI 0.119 · Tortoise ORM (async) · PostgreSQL/MySQL async drivers · Redis · Celery + APScheduler

- Built a fully asynchronous, auto-discovering FastAPI architecture — an application factory with an async lifespan hook and dynamically registered per-domain routers — running asyncpg/aiomysql drivers and Redis end to end.
- Implemented content-moderation and creator-payout domains with a review state machine and an earnings ledger, backed by scheduled Celery + APScheduler jobs.

ProspectLead — AI Lead-Generation SaaS · lead backend developer

Jan 2026 – Jul 2026

prospectlead.ai · Django · Django REST Framework · PostgreSQL · Redis · Celery + Beat · OpenAI · Stripe

- Owned the credit-based billing engine end to end — an append-only PostgreSQL ledger with a running-balance snapshot, reserve-on-submit / finalise-on-callback semantics, and a Celery Beat watchdog auto-failing stuck jobs after six hours.
- Governed OpenAI (LLM) usage cost in production — per-day, per-project token and cost accounting to twelve decimal places, giving the business real unit economics per AI-generated lead.

ArchiCoPro — Members' Content Portal · lead backend developer

Jun 2026 – Jul 2026

archicopro.cloud · FastAPI · Tortoise ORM · PostgreSQL · Redis · Celery · Docker Compose · Caddy

- Lead backend developer on a FastAPI portal with feature-level RBAC and a moderated-forum state machine with a full audit trail, backed by PostgreSQL and Redis.
- Built self-service platform operations: admin-editable SMTP configuration and a scheduled backup system with configurable frequency, so the association could manage its own mail and backups without engineering involvement.

Also delivered — Tundra (thundra.de, three-service Django + FastAPI e-commerce estate on PostgreSQL) · LookUp (Django REST backend, PostgreSQL, AWS S3) · django_templet, my own open-source reusable Django REST starter with Celery, Docker and CI/CD built in.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science & Engineering

May 2020 – Jun 2024

IUBAT — International University of Business Agriculture and Technology, Dhaka · CGPA 3.59 / 4.00 · Degree certificate issued 30 May 2024

- Thesis: Implementation of Parallel Data Transmission in Li-Fi Technology Using RGB Light. Practicum: Development of an Internet Service Provider System. Coursework: Data Structures & Algorithms · DBMS · Software Engineering · Operating Systems · Computer Networks.

Python-Django — EDGE, Enhancing Digital Government and Economy (Bangladesh Government ICT programme) · Jul 2025 ·

Internship Certificate — Cyber Hundred · Jun 2024 · References available on request.

COLLABORATION & PRODUCTION SUPPORT

Work daily alongside frontend, QA and DevOps engineers and business analysts across agency client teams, taking client requirement documents through to a deployed backend. Participate in code review, debugging, performance tuning and production support as the backend owner on each project. Documentation handed to clients and teammates includes per-app developer guides, API references, and a six-chapter, plain-language operations handover written for a non-technical owner on one project. Remote collaboration experience with US, German, Middle Eastern and Australian clients through the agency's Fiverr-sourced pipeline.
